

Personal Care

# EcoSense™ Surfactants

## Formulating Guidelines

EcoSense™

# Formulating Guidelines for EcoSense™ Surfactants

## Order of Addition

1. EcoSense Surfactants can be easily dispersed in water at room temperature. If sedimentation or crystallization appears in EcoSense 1200, warm to 40°C prior to use.
2. Mix with moderate agitation until a homogeneous solution is formed.
3. Add additional formulation ingredients.
4. Adjust formulation pH if necessary.

## Starting Formulation Examples

### Starting Formulation 1: All-natural Shampoo Formulation

| Ingredient                          | INCI / CTFA Name       | % Active     | % as supplied | Supplier                 |
|-------------------------------------|------------------------|--------------|---------------|--------------------------|
| Water                               | Water/Aqua             | q.s. to 100  | 57.50         |                          |
| Xanthan Gum                         | Xanthan Gum            | 1.00         | 1.00          | Sigma-Aldrich            |
| <b>EcoSense 919 Surfactant</b>      | <b>Coco-Glucoside</b>  | <b>15.00</b> | <b>29.31</b>  | <b>Dow</b>               |
| Amphosol CA                         | Cocamidopropyl Betaine | 4.00         | 11.14         | Stepan                   |
| Unisept SB                          | Sodium Benzoate        | 0.55         | 0.55          | Universal Preserv-A-Chem |
| <b>NEOLONE™ PH 100 Preservative</b> | <b>Phenoxyethanol</b>  | <b>0.50</b>  | <b>0.50</b>   | <b>Dow</b>               |

## Processing Instructions:

1. Disperse Xanthan Gum in water.
2. Add surfactants and stir until a uniform solution is formed.
3. Add sodium benzoate and phenoxyethanol and stir until well dissolved.

### Formulation Characteristics:

| Parameter       | Range         | Method                  |
|-----------------|---------------|-------------------------|
| pH              | 5.0 – 5.5     | pH meter                |
| Viscosity (cPs) | 1,300 – 3,000 | Brookfield RV7 @ 30 rpm |

### Starting Formulation 2: Mild Shampoo Formulation

| Ingredient                          | INCI / CTFA Name                                    | % Active    | % as supplied | Supplier                 |
|-------------------------------------|---|-------------|---------------|--------------------------|
| Water                               | Water/Aqua  | q.s. to 100 | 68.99         |                          |
| Xanthan Gum                         | Xanthan Gum   | 1.00        | 1.00          | Sigma-Aldrich            |
| <b>ACULYN™ 28 Rheology Modifier</b> | <b>Acrylates/Beheneth-25 Methacrylate Copolymer</b> | <b>1.00</b> | <b>5.00</b>   | <b>Dow</b>               |
| <b>EcoSense™ 919 Surfactant</b>     | <b>Coco-Glucoside</b>                               | <b>6.00</b> | <b>11.67</b>  | <b>Dow</b>               |
| <b>EcoSense 1200 Surfactant</b>     | <b>Lauryl Glucoside</b>                             | <b>1.00</b> | <b>1.95</b>   | <b>Dow</b>               |
| Stepanol WA-Extra                   | Sodium Lauryl Sulfate                               | 3.00        | 10.34         | Stepan                   |
| <b>OPULYN™ 301 Opacifier</b>        | <b>Styrene/Acrylates Copolymer</b>                  | <b>0.40</b> | <b>1.00</b>   | <b>Dow</b>               |
| Unisept SB                          | Sodium Benzoate                                     | 0.55        | 0.55          | Universal Preserv-A-Chem |
| <b>Neolone™ PH 100</b>              | <b>Phenoxyethanol</b>                               | <b>0.50</b> | <b>0.50</b>   | <b>Dow</b>               |

## Processing Instructions:

1. Disperse ACULYN 28 Rheology Modifier in water.
2. Add the surfactants and stir until a uniform solution is formed.
3. Pre-dilute OPULYN 301 Opacifier in 4% water, then add to formulation.
4. Add sodium benzoate and phenoxyethanol, and stir until well dissolved.
5. Adjust formulation pH.

### Formulation Characteristics:

| Parameter       | Range         | Method                  |
|-----------------|---------------|-------------------------|
| pH              | 6.0 – 6.5     | pH meter                |
| Viscosity (cPs) | 5,000 – 7,000 | Brookfield RV7 @ 30 rpm |

### Starting Formulation 3: “Green & Clean” Low Environmental Impact Shampoo

| Phase | Trade Name                           | INCI/CTFA Name   | % Wt. | Supplier       |
|-------|--------------------------------------|--|-------|----------------|
| A     | Deionized Water                      | Water/Aqua   | 47.13 |                |
| A     | Standapol ES2 (25% active)           | Sodium Laureth Sulfate   | 24.20 | BASF           |
| A     | Amphosol CA (38% active)             | Cocamidopropyl Betaine   | 5.28  | Stepan         |
| A     | EcoSense™ 1200 Surfactant            | Lauryl Glucoside   | 9.61  | Dow            |
| B     | EcoSmooth™ Silk Conditioning Polymer | Ethylene/Octene Copolymer (and) Ethylene/Sodium Acrylate Copolymer | 2.38  | Dow            |
| B     | ACULYN™ 38 Rheology Modifier         | Acrylates/Vinyl Neodecanoate Crosspolymer                          | 4.77  | Dow            |
| C     | Sodium Benzoate                      | Sodium Benzoate  | 0.59  |                |
| C     | Deionized Water                      | Water/Aqua   | 1.77  |                |
| D     | Citric Acid (10%)                    | Citric Acid  | 3.67  |                |
| D     | NEOLONE™ PH 100 Preservative         | Phenoxyethanol   | 0.50  | Dow            |
| D     | Mandarin Lily                        | Fragrance/Parfum   | 0.10  | Custom Essence |

### Processing Instructions:

1. Mix the ingredients of Phase A until uniform. (It is recommended that EcoSense™ 1200 Surfactant be warmed to 50 – 60°C prior to use.)
2. Add the components of Phase B to Phase A one at a time with agitation.
3. Combine the ingredients of Phase C in a small vessel with agitation until a clear solution is formed. Add Phase C to Phase A/B. Continue agitation.
4. Add Citric Acid to Phase A/B/C to reach pH 5.0 – 5.2. Add NEOLONE™ PH 100. Continue agitation and add fragrance.

### Formulation Characteristics:

| Parameter       | Range               | Method                 |
|-----------------|---------------------|------------------------|
| Appearance      | Opaque white liquid | Visual                 |
| pH              | 5.0–5.3             | pH meter               |
| Viscosity (cPs) | 14,000–20,000       | Brookfield LV4, 12 rpm |

## Starting Formulation 4: All-Natural Baby Shampoo

| Ingredient                         | INCI / CTFA Name       | % Active    | % as supplied | Supplier      |
|------------------------------------|------------------------|-------------|---------------|---------------|
| Water                              | Water/Aqua             |             | 66.28         |               |
| Xanthan Gum                        | Xanthan Gum            | 1.00        | 1.00          | Sigma-Aldrich |
| <b>EcoSense™ 3000 Surfactant</b>   | <b>Decyl Glucoside</b> | <b>6.00</b> | <b>11.80</b>  | <b>Dow</b>    |
| <b>EcoSense™ 919 Surfactant</b>    | <b>Coco-Glucoside</b>  | <b>4.00</b> | <b>7.80</b>   | <b>Dow</b>    |
| Stepanol DCFAS-N                   | Sodium Coco-Sulfate    | 3.00        | 3.30          | Stepan        |
| Glycerin                           | Glycerin               | 1.00        | 1.00          |               |
| Sodium Benzoate (25%)              | Sodium Benzoate        | 0.58        | 2.32          |               |
| <b>NEOLONE™ PH100 Preservative</b> | <b>Phenoxyethanol</b>  | <b>0.50</b> | <b>0.50</b>   | <b>Dow</b>    |
| Citric Acid (10%)                  | Citric Acid            |             | 6.00          |               |

### Processing Instructions:

- Gradually add Xanthan Gum to water under agitation. Stir for about one hour.
- Add surfactants and stir until uniform.
- Add Glycerin, Sodium Benzoate and Phenoxyethanol one at a time, stirring until uniform.
- Adjust pH with citric acid to about pH 5.0.

## Formulation Characteristics:

| Parameter  | Range                     | Method               |
|------------|---------------------------|----------------------|
| Appearance | Hazy, light yellow liquid | Visual               |
| pH         | 4.8–5.5                   | pH meter             |
| Viscosity  | 3,000–5,000 cPs           | Brookfield 4, 12 rpm |

## Starting Formulation 5: Milky Conditioning Cleanser for Hair and Body

### Processing Instructions:

- In a separate vessel, prepare the 2% solution of UCARE™ Polymer by mixing the ingredients of Phase E and stirring until a clear, homogenous, slightly viscous solution is obtained (45 – 60 minutes).
- In the main vessel, mix the ingredients of Phase A and stir until complete dissolution of the surfactant is achieved.
- Add the ingredients of Phase B individually under stirring.
- Raise and stabilize pH above 8.0 upon addition of Phase C.
- Add the ingredients of Phase D and Phase E.
- Separately, prepare the diluted opacifier solution by mixing the ingredients of Phase F and adding it to Phase A – E under stirring.
- Adjust the pH to the required value using Phase G.
- Add the ingredients of Phase H individually under stirring.

## Formulation Characteristics:

| Parameter       | Range         | Method                                  |
|-----------------|---------------|---|
| Appearance      | White opaque  | Visual                                  |
| pH (as is)      | 6.5 – 6.8     | pH meter                                |
| Viscosity (cPs) | 3,000 – 5,000 | Brookfield LV, Spindle 4, 12 rpm @ 23°C |

### Processing Instructions:

- In a separate vessel, prepare the 2% solution of UCARE™ Polymer by mixing the ingredients of Phase F and stirring until a clear, homogeneous, slightly viscous solution is obtained (approximately 45 – 60 minutes).
- In the main vessel, mix the ingredients of Phase A and stir until complete dissolution is achieved.
- Add Phase B and stir until complete dissolution is achieved.
- Add half of Phase C under stirring and heat to 70°C.
- Add Phase D and stir at 70°C until complete dissolution is achieved.
- Remove the mixture from heat and add the remaining quantity of Phase C, along with Phase E.
- Once the mixture has cooled down, add Phase F and the ingredients of Phase G individually under stirring.

## Formulation Characteristics:

| Parameter       | Range                                  | Method                                  |

### Processing Instructions:

- Add VERSENE™ Na<sub>2</sub> Crystals into 70% of the total water.
- Add SLES, Cocamidopropyl Betaine and EcoSense™ 3000 one by one.
- Add EcoSmooth™ Satin.
- Adjust the pH (5.5 – 6.5) with Citric Acid (10%) in solution
- Add fragrance and KATHON™ CG.

## Formulation Characteristics:

| Parameter  | Range     | Method                         |
|------------|-----------|--------------------------------|
| Appearance | Clear     | Visual                         |
| pH         | 5.5 – 6.5 | pH meter                       |
| Viscosity  | ~5,000    | Brookfield LV 3, 12 rpm @ 25°C |

## Starting Formulation 8: Value Brand Body Wash

| Ingredient                         | INCI / CTFA Name       | % Active    | % as supplied | Supplier   |
|------------------------------------|------------------------|-------------|---------------|------------|
| Deionized Water                    | Water/Aqua             |             | 42.64         |            |
| Standapol ES-2                     | Sodium Laureth Sulfate | 9.00        | 36.15         | BASF       |
| Amphosol CA                        | Cocamidopropyl Betaine | 3.00        | 7.92          | Stepan     |
| <b>EcoSense™ 3000 Surfactant</b>   | <b>Decyl Glucoside</b> | <b>2.00</b> | <b>3.90</b>   | <b>Dow</b> |
| Mackernium 007S                    | Polyquaternium-7       | 0.25        | 3.00          | Rhodia     |
| Sodium Chloride                    | Sodium Chloride        | 1.00        | 1.00          |            |
| Sodium Benzoate (25%)              | Sodium Benzoate        | 0.58        | 2.32          |            |
| <b>NEOLONE™ PH100 Preservative</b> | <b>Phenoxyethanol</b>  | <b>0.50</b> | <b>0.50</b>   | <b>Dow</b> |
| Citric Acid (10%)                  | Citric Acid            |             | 2.57          |            |

### Processing Instructions:

1. Add the surfactants to the water and stir until uniform.
2. Add the Polyquaternium-7, Sodium Chloride, Sodium Benzoate and Phenoxyethanol to the mixture one at a time, stirring until uniform.
3. Adjust the pH to about 5.0 with Citric Acid.

## Formulation Characteristics:

| Parameter | Range           | Method                 |
|-----------|-----------------|------------------------|
| pH        | 5.0 – 5.5       | pH meter               |
| Viscosity | 12,000 – 17,000 | Brookfield LV4, 12 rpm |

## Starting Formulation 9: Clear, Conditioning Body Wash

| Phase | Ingredient                                 | INCI/CTFA Name   | % Active      | % Wt.       | Supplier                       |
|-------|--|--|---------------|-------------|--------------------------------|

| C     | Sodium Laureth-2 Sulfate (27% active)      | Sodium Lauryl Ether Sulfate                                    | 8.10          | 30.05       | Volp Industria e Comercio Ltda |
| C     | Cocamidopropyl Betaine (30% active)        | Cocamidopropyl Betaine   | 2.10          | 7.00        | Clariant                       |
| C     | Citric Acid                                | Citric Acid  |               | q.s.        |                                |
| C     | <b>KATHON™ CG Preservative</b>             | <b>Chloromethylisothiazolinone (and) Methylisothiazolinone</b> | <b>0.0008</b> | <b>0.05</b> | <b>Dow</b>                     |
| C     | Fragrance                                  | Fragrance/Parfum   |               | q.s.        |                                |
| C     | Sodium Chloride                            | Sodium Chloride  | 2.20          | 2.20        |                                |

### Processing Instructions:

1. Mix the components of Phase A.
2. Mix the water and SoftCAT™ SL-30 Conditioning Polymer for 15 minutes, and then add the VERSENE™ Na<sub>2</sub> Crystals.
3. Add Phase B to Phase A.
4. Add the Sodium Lauryl Ether Sulfate and Cocamidopropyl Betaine to the mixture, and adjust the pH to 5.5 – 6.5 with Citric Acid.
5. Add the remaining ingredients of Phase C to the mixture.

### Formulation Characteristics:

| Parameter       | Range     | Method                        |
|-----------------|-----------|-------------------------------|
| Appearance      | Clear     | Visual                        |
| pH              | 5.5 – 6.5 | pH meter                      |
| Viscosity (cPs) | ~5,000    | Brookfield LV3, 12 rpm @ 25°C |

### Starting Formulation 10: Transparent, Clear Conditioning Body Wash

| Ingredient                                 | INCI / CTFA Name                               | % Active      | % as supplied | Supplier           |
